

Viena

Outdoor furniture for public spaces, gardens and patios

www.enzis.at

Commercial register: FN376088 x UID: ATU67083078

Bank account number: BA/CA BLZ: 12000, KNR: 50786062393
(IBAN AT66 1200 0507 8606 2393, BIC BAUATWW)

Important product information:

- All products of the Enzi-family, including the Viena, are arts objects. Any claims deriving from product liability are excluded.
- The Viena is produced from polyethylene. It is empty inside
- The measurements are 2950/1167/934mm (length/depth/height)
Deviations from these measurements of up to 2% are possible for production reasons.
- The surface or edges of the Viena may show slight curvatures for production reasons. On the sitting surface this may lead to the fact that — after rainfall — the rainwater remains on the sitting surface and needs to be wiped away before usage.
- The Vienas should be used only in outdoor areas.
- The Vienas can be exposed to any weather conditions and can be used during every season. If possible, though, coverage or a temporary storage of the Viena below a roof or in a storage room during the winter months at minus temperatures is in any case better for the furniture.
- The Viena weighs approx. 100kg. It is designed in a way so that it can be moved and positioned by 4 persons.
- In case of sculptural installations, stackings and storages, a structural engineer needs to be contacted and the rules concerning fire protection need to be observed.
- The Vienas can be tied up together for example with commercial tension belts.
The joining means are not included in the scope of delivery. We would be happy to share our experiences with you in this regard!
- The Vienas are hollow items. - They have 1 -hidden — opening which is locked with a white screw cap.

Please inspect the Vienas concerning possible shipping damages before signing the delivery note. Subsequent complaints cannot be accepted. In case of strongly fluctuating temperatures it may result in an expansion/compression of the air contained in the Viena-hollow item, which may cause curvatures (swellings) of the Vienas. In such cases open the white screw caps on time to release the air.

The Viena in public, unsupervised areas

Our experience has shown us that vandalism unfortunately is a commonplace. In this context please consider the following:

- Not only but mainly in freely accessible areas, we highly recommend to check the installation of the Vienas together with respective safety engineers (fire protection, statics, etc.) and the competent authorities.
- Due to the exertion of higher pressure or due to different movements — instead of lifting the item up — the Vienas can — depending on the underground — show traces of scratches. Hitting the surfaces or edges, dropping heavy items on top, to run into or knocking over the Viena etc. can cause damages. The scratches, dents and cuts, which may result, will not recover but they will remain on the surface and will be visible.
- If the Vienas get daubed with paint, the removal of graffiti and felt tip pens or ballpoint pens is only partly possible. We recommend the usage of an adequate solvent. On request we can also give you cleaning recommendations for normal stains. Dirt is of course more visible on lighter colours.
- In order to avoid unwanted movements or even removals in public areas, we recommend to tie down the Vienas at least in pairs (that means at least two single pieces)
- In order to increase the weight of the Viena, you can fill it with water or sand to make movements or removals of the furniture more difficult. During winter months they need to be emptied, to avoid possible breaks or a general damages.

* When buying the joining means, please watch out for their UV resistance!

Please consider that the indicated characteristics of the Vienas do not represent any reasons for complaints!
